

DESIP is a UK aid funded programme focused on Delivering Sustainable and Equitable Increases in Family Planning (DESIP) in low Contraceptive Prevalence Rate (CPR) counties in line with KENYA 'Vision 2030'.

The country's long-term development blueprint, has moved Kenya toward a prosperous country where the workforce is skilled and healthy. Gains in FP uptake have been considerable, with the 2018 modern Contraceptive Prevalence Rate (mCPR) amongst married women close to 59%, exceeding Kenya's FP2020 target of 58.3%.

Despite progress, many women and girls are left behind, notably those in the 19 DESIP counties (Wajir, Garissa, Mandera, Samburu, Isiolo, Marsabit, Kilifi, Lamu, Kwale, Tana River, Mombasa, Baringo, Narok, Kajiado, West Pokot, Elgeyo Marakwet, Turkana, Migori and Homa Bay).

Through innovative and evidence-based market facilitation, and better targeted service delivery that reaches the poorest of the poor, the DESIP team will develop a more sustainable and healthier FP market in Kenya.

PROGRAMME IMPACT, OUTCOME & OUTPUTS

The goal of the programme is to ensure that women and girls can safely plan their pregnancies and improve their SRHR, particularly the young, rural, and marginalized, with programme impact contributing to reduced maternal mortality, new-born, and child mortality, and increased mCPR in Kenya. The program outcome is greater and more equitable access to, and uptake of, FP services in Kenya with a particular focus on adolescents, persons with disabilities, and poor rural women in Kenya.

DESIP OBJECTIVES

Goal: To increase access to, and use of, modern contraceptives across Kenya, while increasing equity and sustainability, with a particular focus on adolescents, people living with disability and poor rural women.

Output 1:
Greater availability of FP commodities

Output 2:
Greater demand for FP commodities

Output 3:
Sustainability of the Private Sector

Output 4:
Improved & sustainable National ownership (Strengthened Public Sector)
